

## Brief Quality Improvement Reports

The Journal of Pain and Symptom Management publishes an ongoing series of papers describing quality improvement projects: **Brief Quality Improvement Reports**. The Journal offers this professional forum to encourage dialogue, peer review, and dissemination in response to a growing international concern about quality care, patient safety, and the role of evidence-based medicine. Submissions should describe specific quality improvement projects, such as efforts to increase pain screening, encourage goals discussions, promote palliative care consults, encourage earlier hospice referrals, or support staff well-being. Submissions should describe the impact of the intervention, either in terms of change over time or relative to a comparator.

Papers must include the following: 1) A structured abstract of  $\leq 150$  words with five headings: Background, Measures, Intervention, Outcomes, Conclusions/Lessons Learned; 2) Five sections—Background, Measures, Intervention, Outcomes, Conclusions/Lessons Learned—requiring no more than 2500 words; 3) No more than 10 references and two graphs or tables. (References/tables/graphs are not included in the word count.)
